

Ex.no:7	DATA VISUALIZATION USING TABLEAU

Aim:

To perform data analysis, data preparation, and visual exploration on the tourism dataset (tourism_dataset_200.csv) in Tableau Desktop/Prep to analyze tourism destinations, visitor patterns, seasonal preferences, budgets, ratings, and accommodation and transportation choices.

Algorithm:

1. Data Ingestion & Connection: Connect Tableau Desktop to tourism_dataset_200.csv as a text/CSV file source. Verify field data types for destination, country, continent, tourism type, best season, duration, budget, rating, annual visitors, accommodation type, and transportation.

2. Data Cleansing & Transformation: Check the dataset for missing, null, duplicate, or inconsistent values. Ensure numeric fields such as Average Duration, Budget, Rating, and Annual Visitors are recognized correctly. Standardize categorical fields such as Continent, Tourism Type, Best Season, Accommodation Type, and Transportation.

3. Exploratory Visual Analysis: Create worksheets and charts to explore the major tourism characteristics and relationships present in the dataset.

4. Destination & Tourism Type Analysis: Compare destinations and tourism types using bar charts or packed bubbles to identify the distribution of destinations across categories such as cultural, adventure, beach, nature, historical, and other tourism types.

5. Seasonal & Geographic Analysis: Analyze Best Season and Continent to identify seasonal travel preferences and geographic patterns in tourism destinations.

6. Visitor, Budget & Rating Analysis: Visualize Annual Visitors, Average Budget, Average Duration, and Rating to identify high-visitor destinations, popular budget ranges, typical trip durations, and highly rated tourism destinations.

7. Accommodation & Transportation Analysis: Analyze accommodation and transportation categories to understand commonly associated travel choices across the tourism dataset.

8. Dashboard Assembly & Formatting: Combine the key worksheets into an interactive executive dashboard. Apply appropriate filters such as Continent, Tourism Type, Best Season, Accommodation Type, and Transportation across the dashboard components.

Output:
